

# Using Chicago Manual of Style with LaTeX and biblatex-chicago

This guide explains how to set up your LaTeX document for Chicago Manual of Style footnotes and bibliography citations using the `biblatex-chicago` package. Below are the detailed instructions, code examples, and compilation steps using XeLaTeX.

## Step 1: Load the Package

Include the following in your document preamble to load the `biblatex-chicago` package with the necessary options. The `notes` option enables Chicago-style footnotes. The `backend=biber` option specifies Biber as the bibliography processor and `short` enables shortened citations on subsequent uses.

```
\usepackage[notes,backend=biber,short]{biblatex-chicago}
```

## Step 2: Add the Bibliography Resource

Register your bibliography file (e.g. `references.bib`) in the preamble.

```
\addbibresource{references.bib}
```

## Step 3: Citing Sources in Your Document

Use the `\autocite` command to automatically generate Chicago-style footnotes for your citations. The first citation provides a full reference, and subsequent citations use a shortened format if the `short` option is enabled.

**Example:**

```
World War I had lasting impacts on Germany\autocite{GermanHistoryVersailles}.
```

Another example:

```
Otto Dix depicted war as overwhelming destruction\autocite{UMMAArtilleryBattle}.
```

## Step 4: Print the Bibliography

At the end of your document, include the following command to display the complete bibliography:

```
\printbibliography
```

## Step 4.5: Single Spacing in the Bibliography

To ensure that the bibliography is single-spaced, include the following command before printing the bibliography:

```
\renewcommand{\bibfont}{\setstretch{1}}
```

## Step 5: Compilation Instructions with XeLaTeX

To compile your document using XeLaTeX, follow these steps:

1. Run XeLaTeX on your document:

```
xelatex essay.tex
```

2. Process the bibliography with Biber:

```
biber essay
```

3. Run XeLaTeX again to update references:

```
xelatex essay.tex
```

4. Run XeLaTeX one more time to ensure all citations are correctly updated:

```
xelatex essay.tex
```

Combined:

```
xelatex essay.tex && biber essay && xelatex essay.tex && xelatex essay.tex
```

## Step 6: Example Bibliography Entries

Below are sample entries from the `references.bib` file:

```
@online{UMMAArtilleryBattle,
  author      = {University of Michigan Museum of Art},
  title       = {Artillery Battle (Artillerieschlacht)},
  shortauthor = {UMMA},
  shorttitle  = {Artillery Battle},
  year        = {1917},
  url         = {https://umma.umich.edu/objects/artillery-battle-
    artillerieschlacht-1967-1-41/},
  urldate     = {2025-02-10},
}

@online{UMMAHunger,
  author      = {University of Michigan Museum of Art},
  title       = {Hunger},
  shortauthor = {UMMA},
  shorttitle  = {Hunger},
  year        = {1924},
  url         = {https://umma.umich.edu/objects/hunger-1957-1-105/},
  urldate     = {2025-02-10},
}

@misc{Hartlaub1925,
  author      = {Gustav Friedrich Hartlaub},
  title       = {Introduction to the \textit{Neue Sachlichkeit} Exhibition
    Catalogue},
  shortauthor = {Hartlaub},
  shorttitle  = {Neue Sachlichkeit},
  howpublished = {Exhibition catalog, Kunsthalle Mannheim},
  year        = {1925},
}

@book{Plumb2006,
  author      = {Steve Plumb},
  title       = {\textit{Neue Sachlichkeit} 1918--33: Unity and Diversity of an
    Art Movement},
  shortauthor = {Plumb},
  shorttitle  = {Neue Sachlichkeit 1918--33},
  publisher   = {Rodopi},
  address     = {Amsterdam},
  year        = {2006},
}

@online{GermanHistoryVersailles,
  author      = {German History in Documents and Images},
  title       = {Treaty of Versailles and its Economic Impact},
  shortauthor = {GHDI},
  shorttitle  = {Versailles Economic Impact},
  year        = {1919},
  url         = {https://ghdi.ghi-dc.org/pdf/eng/DEST_SOLMITZ_ENG.pdf},
  urldate     = {2025-02-10},
}
```

With these steps, your LaTeX document is configured for Chicago Manual of Style citations using the `biblatex-chicago` package, and you are ready to compile with XeLaTeX.
